SAN FRANCISCO, CAL.  
WEATHER BUREAU OFFICE  
MARCH 25, 1915

Departure of the Mean Temperature from the Normal, February, 1915.

## U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

## CALIFORNIA SECTION.

G. H. WILLSON, District Forecaster.

VOL. XIX. SAN FRANCISCO, FEBRUARY, 1915. No. 2.

## GENERAL SUMMARY.

Taking into consideration the average rainfall, the number of rainy days and the wind velocity, February, 1915, was a record-breaking month in California. It was the rainiest February on record, the average rainfall exceeding by two inches the greatest February rainfall since 1897, when State records were begun. The average rainfall was nearly six inches above the normal and only the north-eastern and south-eastern sections of the State showed a deficiency. The average number of rainy days for the State was fourteen and along the northern coast the average exceeded twenty days. No station was without rain during the month.

The depression which entered from the Pacific near the end of January was the first of a series of storms, remarkable for the low barometer at their centers and the high wind velocities accompanying them. This storm was followed almost immediately by a storm of still greater intensity. During the first three days of the month unusually high winds prevailed over the entire western portion of the State, paralyzing shipping, blowing down timber and even damaging houses. At Point Reyes the highest velocity recorded was ninety-five mile an hour, and velocities of ninety miles an hour occurred at intervals for nearly seven hours on the 1st and 2nd. Although steamers were forced to run for harbors all along the coast to escape the storm, the damage to shipping was slight. In San Francisco harbor a dozen ships dragged their anchors and serious accidents were narrowly averted. All ships were bar-bound for thirty-six hours, street-car service was interrupted, trees and poles were blown down and windows broken. Heavy rains accompanied the storm, causing floods in small rivers that caused considerable damage. Railroad traffic in the north was interrupted for two days by land-slides.

The third storm was accompanied by high winds and much rain, with practically a repetition of the damage done by the last disturbance. The Sacramento river reached the flood stage and broke through the levees in places, flooding large stretches of agricultural land. Small streams again over-flowed large areas of flat land and a large number of people were forced to seek higher ground temporarily.

There was practically no damage from frost during the month, and all crops are in excellent condition. The snowfall was above normal over the whole State and at the end of the month the outlook for the season's water supply was the best in years.

## PRESSURE.

The monthly mean atmospheric pressure for the State, reduced to sea-level, was 29.98 inches.

The highest was 30.45 inches at Fresno on the 4th.

The lowest was 28.94 inches at Point Reyes on the 2nd.

The range for the State was 1.51 inches.

## TEMPERATURE.

The monthly mean temperature for the State was 46.6 degrees, which is 1.9 degrees below the normal.

The highest monthly mean was 61.4 degrees at Mammoth Tank and the lowest was 23.5 degrees at Bridgeport.

The highest temperature, 89 degrees, occurred at King City on the 1st and the lowest was -20 degrees at Bridgeport on the 13th.

The range for the State was 109 degrees.

## PRECIPITATION.

The average precipitation for the State was 10.08 inches or 5.67 inches above the normal.

The greatest monthly amount was 38.74 inches at Upper Mattole.

The least monthly amount was 0.02 inch at Calexico.

The greatest amount in 24 hours was 8.90 inches at Stirling City on the 2nd.

## RELATIVE HUMIDITY.

The mean relative humidity from observations taken at 5 a.m. and 5 p. m., for each of the regular Weather Bureau stations, was as follows: Eureka 83; Fresno 72; Independence 73; Los Angeles 76; Mount Tamalpais 94; Red Bluff 88; Sacramento 81; San Diego 78; San Francisco 78; San Jose 84; San Luis Obispo 81.

## WIND.

The prevailing direction of the wind was south.

## SUNSHINE AND CLOUDINESS.

At Eureka there were 58 hours of sunshine during the month or 19 per cent of the possible; at Fresno 135 hours or 45 per cent; at Los Angeles 170 hours or 56 per cent; at Mount Tamalpais 55 hours or 18 per cent; at Red Bluff 107 hours or 36 per cent; at Sacramento 120 hours or 40 per cent; at San Diego, 180 hours or 58 per cent; at San Francisco 108 hours or 36 per cent; at San Jose 117 hours or 37 per cent; at San Luis Obispo 114 hours or 37 per cent.

## MISCELLANEOUS PHENOMENA.

*Thunderstorms.*—Abbots, 2, 3; American Camp, 16, 20; Angels Camp, 2; Arrowhead Springs, 11; Avery, 17, 20; Berkeley, Chester, 16; Chino, Claremont, 11; Colusa, 16; Converse Nursery, 2, 11, 28; Deer Creek, 16; Dudleys, 3; Dunlap, 2, 16; Eureka, 8; Fairmont, 28; Fontana, 11, 20; Fort Bragg, 8, 15; Fort Ross, 7; Glennville, 14; Kennett, 8; Le Grand, 17; Letter Box, 16; Lindsay, 19; Milo, 16; Milton, 20; Mitchell Mill, 16; Newhall, 28; North Bloomfield, 16; Ojai Valley, 2, 28; Peachland, 7; Point Reyes, 7, 10; Red Bluff, 20; Rialto, 11, 28; Sacramento, 16; Salinas, 1; San Bernardino, 11; San Francisco, 16; San Luis Obispo, 2; Three Rivers, 10, 16; Valley Springs, 9, 16; Weitchpec, 22; West Branch, 16; Yosemite, 17.

*Earthquakes.*—Abbots, Arbolado, 28; Cahuilla, 17; Eureka, 18; Hollister, Jolon, 28; Julian, 16; Point Loma, 17, 22; Rohnerville, 18; Salinas, Spreckels, 28.

## OBSERVERS NOTES.

*Corona.*—Until the beginning of this month there had been virtually no runoff, but during February there was a heavy runoff with each storm. No damage was noted, but picking and orchard work has been considerably delayed by the continuous rain.—J. W. Garthwaite.

*El Cajon.*—The ground is saturated and light rains produce heavy runoffs. Grain is doing well and all vegetation is thriving. Wild flowers are in early bloom. Reservoirs are setting new high water marks for the season of the year. Cleared hill lands are washing badly.—H. H. Kessler.

*Westley.*—On the 7th at 3:00 p. m. a very heavy south wind blew off the roofs of barns, wrecked a brick chimney and overturned two wind-mills.—W. G. Carey.

*Yosemite.*—It is estimated that we have more snow in the high Sierras than for years past. The water falls should be good all season.—J. P. Kelly.

The departures from the normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.

\*\* Temperature extremes are from observed readings of the dry bulb; means are computed from observed readings.

† Also on other dates.

T. Precipitation is less than 0.01 inch rain or melted snow.

a, b, c, etc., indicate respectively, 1, 2, 3, etc., days missing from the record.

## SNOWFALL IN THE MOUNTAINS.

The snowfall in the mountains during the month of February, 1915, was very heavy in all portions of the State, and it was well distributed throughout the month. The precipitation at the lower levels was mostly in the form of rain and the snow in the higher regions was very wet and settled rapidly. In most sections there was more snow on the ground at the end of the month than there was at the same time last year. The snow is packed hard and carries a large amount of water, insuring an ample supply for irrigation and power purposes during the coming summer.

The following data were obtained by weighing a cubic foot of snow taken from different depths in the snow banks:

*Clover Valley.*—A cubic foot taken from a bank 30 inches deep weighed 28 pounds.—L. Giudici.

*Eagle Lake.*—A cubic foot of snow taken from the surface of the bank weighed 26 1-2 pounds.—J. S. Spalding.

*Letter Box.*—There were 20 feet of snow on the ground and blocks containing a cubic foot each were taken at the following depths, from the top of the bank to the ground, 2 feet, 5, 8, 11, 13, 16 and 20, averaged 36 pounds each and varied from 29 pounds at the surface to 41 pounds at the bottom.—B. F. Darby.

*Table Rock.*—A cubic foot of snow taken from the surface weighed 20 pounds and melted 10 quarts of water, and one taken 4 feet below the surface weighed 27 pounds and melted 13 1-2 quarts.—Mrs. C. M. Hayes.

*Chester.*—There were 49 inches of snow on the ground and blocks of a cubic foot each from top to bottom weighed as follows: 22 1-2 pounds, 23 1-2, 29 and 30. One inch remaining on the ground was not weighed.—G. W. Olsen.
