JULY, 1915

BY

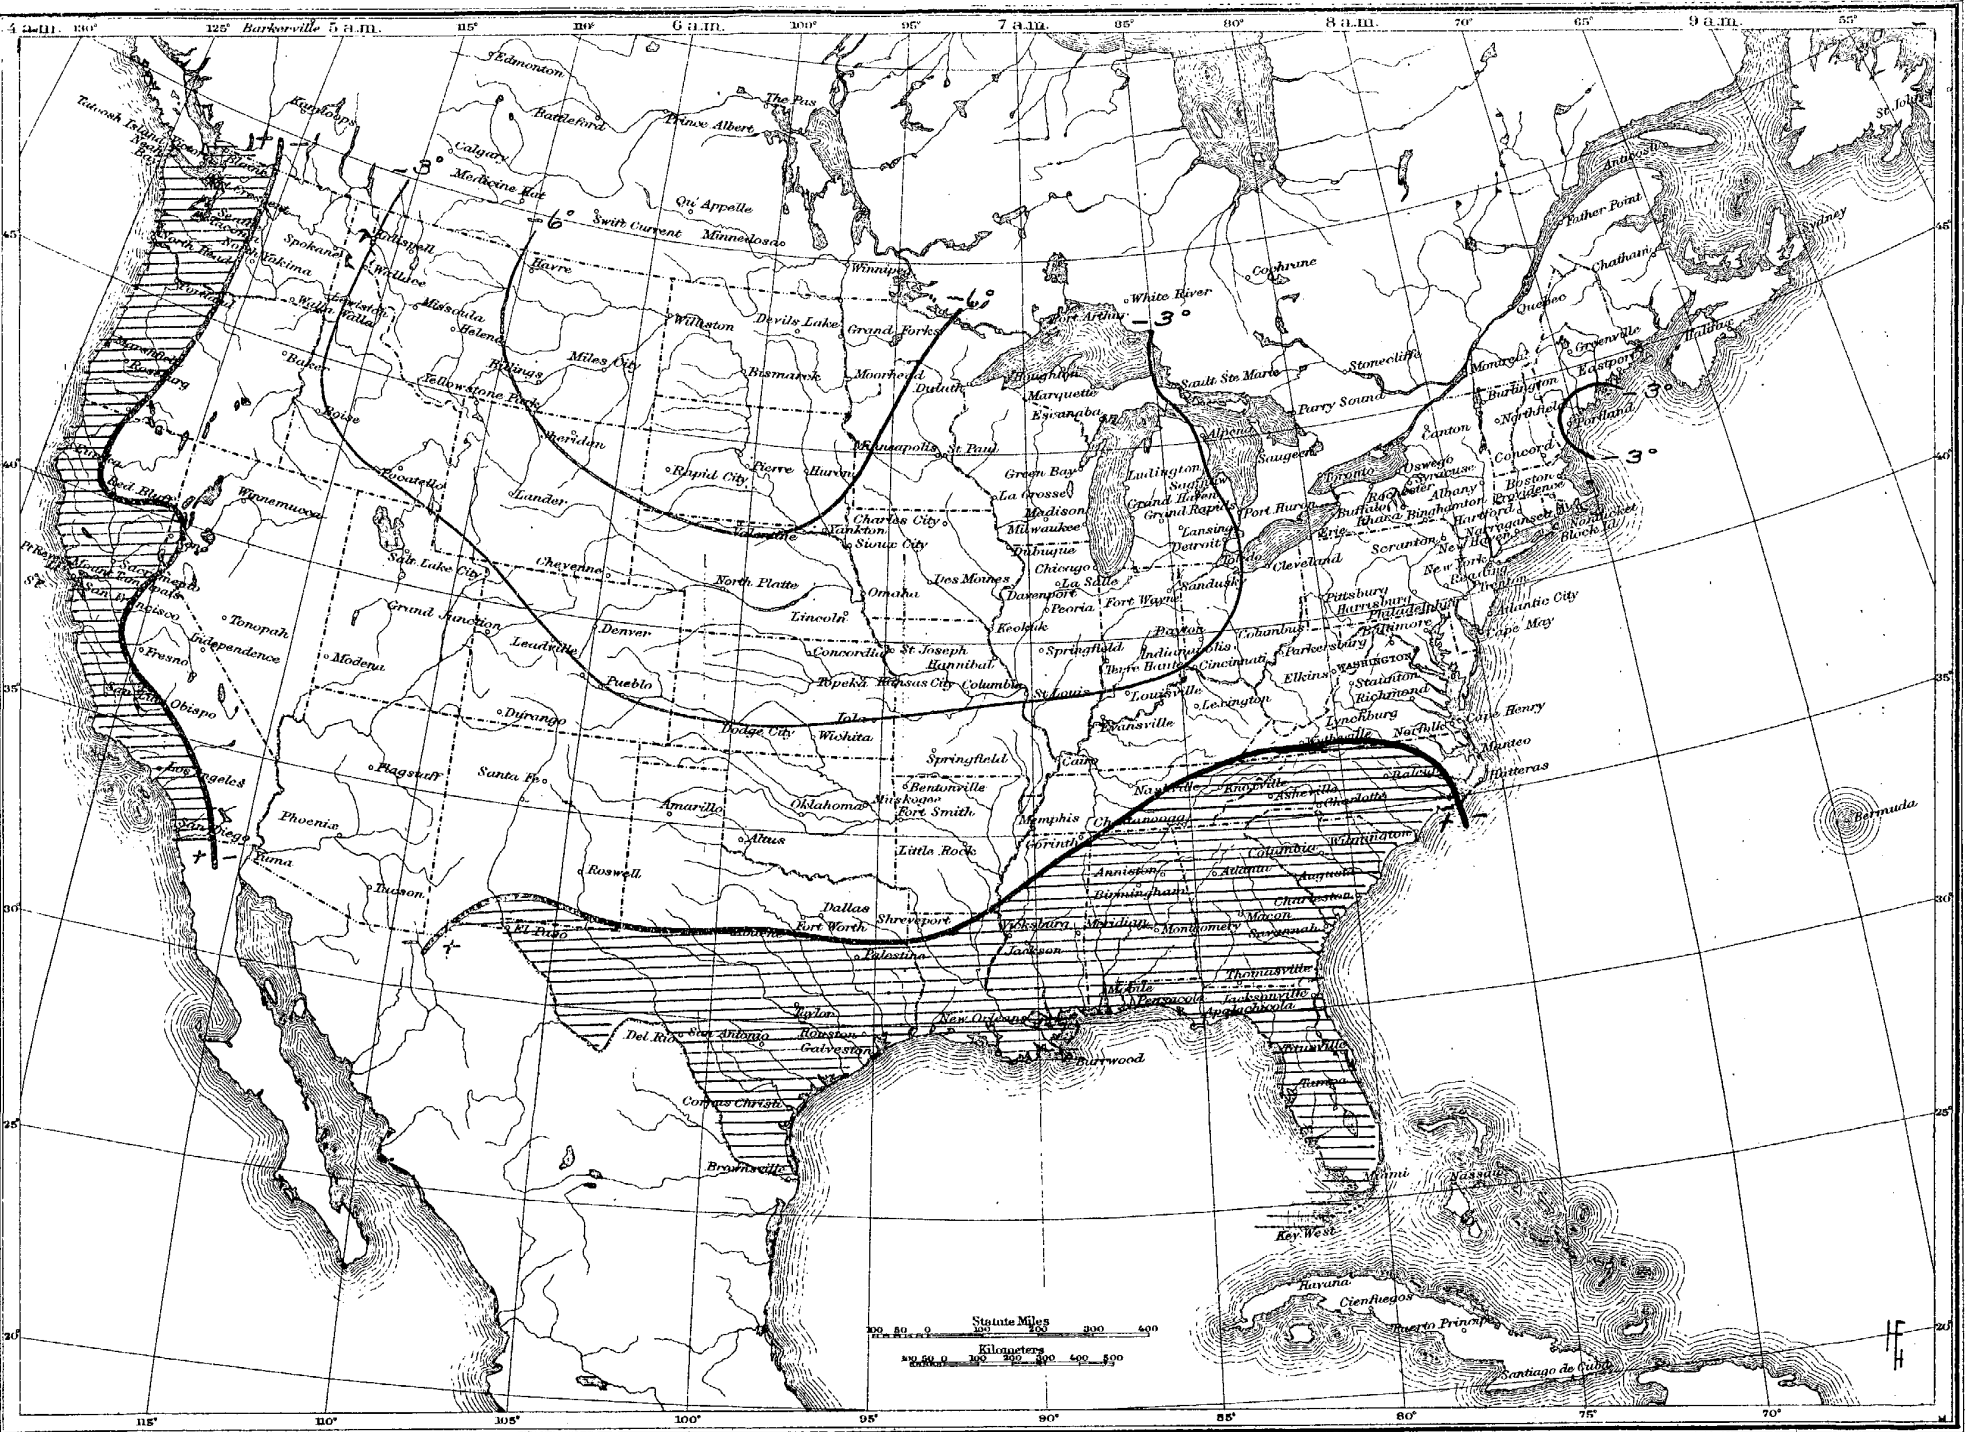

GEORGE H. WILLSON

DISTRICT FORECASTER AND SECTION DIRECTOR

SAN FRANCISCO, CAL.
WEATHER BUREAU OFFICE
AUGUST 19, 1915

Departure of the Mean Temperature from the Normal, July, 1915.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

CALIFORNIA SECTION.

G. H. WILLSON, District Forecaster.

VOL. XIX.

SAN FRANCISCO, JULY, 1915.

No. 7.

GENERAL SUMMARY.

Taken as a whole the month did not differ much from normal July conditions as regards temperature and rainfall. The former averaged slightly above the normal along the coast and below in the interior; the latter, derived mostly from thunderstorms, was largely confined to the more mountainous districts in the northern part of the State, although showers fell here and there in the desert regions of southeastern California on the 22nd and 23rd, the amounts in a few cases, as at Bagdad and Needles, being quite considerable. Thunderstorms likewise occurred at many places in the Sierra on these two dates and also on the 21st, but the earlier period of unsettled weather, which may be roughly described as extending from the 2nd to the 6th, was the one which culminated in the most widespread precipitation. The barometer was abnormally low over the entire coast at this time, cloudiness increased, and on the 5th and 6th light showers fell in the coastal districts from San Luis Obispo north. The amounts to the south of Humboldt County, however, were not important, but the extreme northern coast range and the Siskiyou were well watered, and showers and thunderstorms were of general occurrence throughout the Sierra Nevada Mountains.

There was one spell of extremely hot weather, viz., from the 19th to the 25th inclusive, and this did not affect the coast region, but was very pronounced in the great valleys. During the remainder of the month the temperatures in the interior were generally moderate, even to the point of being decidedly below the seasonal average at times. Cloudiness and fog prevailed along the coast nearly every night. The days were generally clear, however, and the amount of sunshine normal. Conditions were favorable to the ripening and harvesting of all crops. Stream flow was normal and there was plenty of water for irrigation and power purposes.

PRESSURE.

The monthly mean atmospheric pressure for the State, reduced to sea-level, was 29.91 inches.

The highest was 30.20 inches at Eureka on the 6th.

The lowest was 29.57 inches at Fresno on the 10th.

The range for the State was 0.63 inch.

TEMPERATURE.

The monthly mean temperature for the State was 72.7 degrees, which is 1.3 degrees below the normal.

The highest monthly mean was 105.6 degrees at Greenland Ranch and the lowest was 54.4 degrees at Point Reyes.

The highest temperature, 120 degrees, occurred at Greenland Ranch on the 20th and the lowest was 29 degrees at Hume on 5th and at Macdoel on the 17th.

The range for the State was 91 degrees.

PRECIPITATION.

The average precipitation for the State was 0.06 inch or 0.02 inch above the normal.

The greatest monthly amount was 1.30 inches at Crescent City while none occurred at 185 stations.

The greatest amount in 24 hours was 1.29 inches at Bagdad on the 23rd.

RELATIVE HUMIDITY.

The mean relative humidity from observations taken at 5 a. m. and 5 p. m., for each of the regular Weather Bureau stations, was as follows: Eureka 86; Fresno 36; Los Angeles 74; Mount Tamalpais 43; Red Bluff 37; Sacramento 55; San Diego 80; San Francisco 82; San Jose 68; San Luis Obispo 75.

WIND.

The prevailing direction of the wind was west.

SUNSHINE AND CLOUDINESS.

At Eureka there were 186 hours of sunshine during the month or 41 per cent of the possible; at Fresno 438 hours or 98 per cent; at Los Angeles 318 hours or 72 per cent; at Mount Tamalpais 423 hours or 94 per cent; at Red Bluff 435 hours or 95 per cent; at Sacramento 435 hours or 96 per cent; at San Diego, 340 hours or 78 per cent; at San Francisco 317 hours or 69 per cent; at San Jose 408 hours or 91 per cent; at San Luis Obispo 319 hours or 72 per cent.

MISCELLANEOUS PHENOMENA.

Thunderstorms.—Alturas, 3-5, 22, 23, 28-30; Bagdad, 23; Bridgeport, 2-4, 21; Calaveras 20-25; Campo, 21; Chester, 22, 28; China Flat, 4; Converse Nursery, 19-24; Downieville, 23; Fordyce Dam, 22; Happy Camp, 3, 4, 28; Hayfork, 4, 5; Holcomb, 22; La Porte, 23; McCloud, 23, 28; Mineral, 23; Montague, 3, 5, 23; Three Rivers, 21; Weitchpec, 4; Yreka, 3, 4, 23.

Earthquakes.—Brawley, 3; Holcomb, 12; Newhall, 27; Mineral, 22.

OBSERVERS' NOTES.

Gila.—There is more snow on the higher ranges than there has been at this season for 15 years.—A. E. Dannenbrink.

La Porte.—While in Mohawk Valley on the 22nd, it rained very hard for nearly an hour during the afternoon, and there was much thunder and lightning. On the 23rd, while on Nelson Point, upper crossing, it rained and hailed at 3 p. m.—Chas. W. Hendel.

Santa Barbara.—There were 15 mornings with high fog, the weather generally clearing by 9:30. The late crops were greatly benefited by the fogs.—Geo. W. Russell.

Climatological Data for July, 1915.

Table with columns: Stations, Counties, Elevation, Length of record, Temperature (Mean, Departure from normal, Highest, Date, Lowest, Date, Greatest daily range), Precipitation (Total, Departure from normal, Greatest in 24 hours, Snowfall, Precipitation of inch or more, Clear, Partly cloudy, Cloudy), Prevailing direction of wind, and Observers. The table lists 100+ stations across California with their respective data for July 1915.

Climatological Data for July, 1915.—Continued.

The departures from the normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means.
 ** Temperature extremes are from observed readings of the dry bulb; means are computed from observed readings.
 † Also on other dates.
 T. Precipitation is less than 0.01 inch rain or melted snow.
 a, b, c, etc., indicate respectively, 1, 2, 3, etc., days missing from the record.

ERRATA. MAY, 1915.

Delta: Due to an error in reading the minimum thermometer, the record of minimum and mean monthly temperatures are incorrect for the inclusive period, November, 1914 to June, 1915.
 Polson, pages 58 and 61, total precipitation 3.95, should be 4.12.
 Hollister, pages 58 and 62, total precipitation 1.95, should be 2.00; page 62, precipitation on 18th 0.04, should be 0.09.
 Maricopa, page 59, monthly mean temperature 69.8°, should be 64.8°.
 Ojai Valley, page 59, highest temperature 97°, should be 95.

Daily Temperature for July, 1915.

Total Precipitation, Inches, July, 1915.

The influence of the diversified topography of California upon its precipitation is shown by the lines of equal rainfall in inches, on the accompanying relief map.
