

## U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

## NEVADA SECTION.

HENRY F. ALCIATORE, Meteorologist.

VOL. XXXI.

RENO, NEVADA, JULY, 1916.

No. 7.

## GENERAL SUMMARY.

Considered as a whole, July was dry, sunny, and slightly cooler than usual. The temperature was above normal at a few places, but deficient elsewhere. Unusually low night temperatures ( $30^{\circ}$  to  $32^{\circ}$ ) occurred in Elko County on the first three days, and a freezing temperature in the Washoe Lake district as late as the 27th. Maximum temperatures of  $100^{\circ}$  to  $113^{\circ}$  were recorded in some parts of Clark County almost daily.

Fairly heavy and beneficial showers occurred in some parts of Humboldt, Elko, Esmeralda, Lincoln, and Clark counties, but over the rest of the State the rainfall was very light, and at ten stations there was none at all. The average for the Section was 107 per cent of the normal, and 18 per cent less than that of July, 1915.

The month was one of the sunniest of record, and the relative humidity uncommonly low.

As to the effects of the weather on crops, Mr. Edward C. Paxton, Field Agent of the Bureau of Crop Estimates for Nevada, says: "Although extremely dry, the month of July saw a very normal development of nearly all crops in Nevada. The lower ranges have suffered severely from the continued drought and live stock dependent on such ranges are reported thin. Where the first crop of alfalfa, injured by frost, was cut early, a second crop above normal was harvested, and a good third cut is promised. Irrigation water for all crops has been ample, and Nevada bids fair to break all previous records for total production of small grains. Preliminary estimates indicate a winter wheat yield of 24.5 bushels per acre; somewhat less than last year's yield but well up to the average of recent years. Wild hay in Elko County is reported light, due to the severely cold weather of late spring. Present conditions indicate the largest potato crop in Nevada's history. Fruit is almost a failure. Moapa cantaloupes are on the market; the crop is large and excellent in quality."

## TEMPERATURE.

The monthly mean for the State, as shown by the records of 40 stations, was  $71.0^{\circ}$ . The mean for the 24 stations having ten or more years record was  $1.6^{\circ}$  below the normal. The highest recorded was  $113^{\circ}$ , at Logan, on the 22d; the lowest was  $30^{\circ}$  at Gold Creek, on the 1st, at Elko, on the 3d, and at Wells, on the 2d. The greatest daily range was  $63^{\circ}$ , at Elko, on the 20th. The highest monthly mean was  $86.7^{\circ}$ , at Logan; the lowest was  $56.4^{\circ}$ , at Gold Creek.

## PRECIPITATION.

The average for 52 stations reporting was 0.31 inch. For the 26 stations having ten or more years record, the mean was 0.02 inch above the normal. The average amount at 3 stations in the Columbia Basin was 0.50 inch; at 15 stations in the Humboldt Basin, 0.24 inch; at 9 stations in the Truckee Basin, 0.04 inch; at 5 stations in the Carson Basin, a trace; at 4 stations in the Walker Basin, a trace; at 5 stations in the Colorado Basin, 0.89 inch; at 21 stations in the minor basins, 0.31 inch. The greatest monthly fall was 1.23 inches, at Tecoma; there was none at 10 stations. The average number of days with precipitation was 2.

## PRESSURE, HUMIDITY, AND WIND DATA.

Stations.	Barometric Pressure (sea level).			Mean relative humidity.		Wind.		
	Mean.	Highest.	Lowest.	5 a.m.	5 p.m.	Average hourly velocity.	Max. velocity.	Date.
Reno.....	29.86	30.16	29.63	54	16	7.5	33	w. 12
Winnemucca .....	29.89	30.16	29.55	50	15	6.2	35	s. 7
Tonopah.....	29.86	30.11	29.61	34	14	8.6	36	se. 7

## SUNSHINE AND CLOUDINESS.

At Reno, 97 per cent of the possible sunshine was recorded; at Winnemucca, 97 per cent; at Tonopah, 97 per cent. For the State, the average number of clear days was 25; partly cloudy, 4; cloudy, 2.

## MISCELLANEOUS PHENOMENA.

(Dates of)

*Brisk winds.*—1, 2, 7, 8, 9, 12, 13, 14, 17, 18, 20, 25, 26, 27, 28, 29.

*Thunderstorms.*—2, 6, 7, 8, 12, 13, 14, 15, 16, 19, 21, 22, 23, 24, 25, 27, 28, 29, 30, 31.

*Hail.*—Tecoma, 25th; Searchlight, 28th.

## EVAPORATION.

Evaporation stations were established at Lamoille, Elko County, and Indian Springs, Clark County, Nevada, and at Tahoe, Placer County, California (floating pan) July 1, 1916. The total evaporation for July, in inches, was: Lamoille, 8.932; Indian Springs, 13.751; Tahoe, 5.240.

## COMPARATIVE DATA FOR JULY.

Year.	Temperature.			Average precipitation.	Average snowfall.	Number of days.
