## Mesoscale Discussion 863

< Previous MD    Next MD >

Mesoscale Discussion 0863  
 NWS Storm Prediction Center Norman OK  
 1134 PM CDT Sat Jun 06 2020

Areas affected...Dakotas

Concerning...Severe Thunderstorm Watch 265...

Valid 070434Z - 070600Z

The severe weather threat for Severe Thunderstorm Watch 265 continues.

SUMMARY...Wind threat continues ahead of long-lived Derecho over the central Dakotas.

DISCUSSION...Numerous measured severe wind gusts that were occurring with the long-lived Derecho have gradually lessened, with only isolated severe now being observed along the leading squall line. While this MCS appears to have weakened some over the last hour, likely due to encountering more stable boundary layer, forward propagation remains at least 50kt. Some damaging wind threat will continue with this activity despite convection likely becoming increasingly elevated in nature.
