

June 83

2) Inversion near 6000' - NW Cyclonic flow aloft with trough over Nevada + high pressure off coast - Mod - Strong on-shore flow to deserts.

13) Shallow M.L. - Inv. @ $\approx 1000'$ - off shore flow with High Pressure at surface and aloft.

15) Ridge of High Pressure moving towards Calif. NW flow aloft. M.L. inv. $\approx 1000'$ with eddy circulation.

16) M.L. 2000' and lowering slowly.

21) try S-SW flow aloft

Coastal eddy + onshore flow weakening
M.L. @ 3000'

Forecast (3pm)

5)	77.2	50.4	63.8
10)	80.8	52.5	66.65
15)	83.0	53.0	68.0
20)	83.65	53.8	68.725
25)	83.84	53.88	68.86
30)	82.93	54.03	68.48

22) Weakening upper

Level low off S. Cal. Coast - with southerly

flow aloft. M.L.

2-3000' thick - on-

shore flow.

Sea temp. in upper

60s, 70° @ Newport.

23) Wk. Low Pressure

still over area -

M.L. 3000' with

on shore flow
