## Mesoscale Discussion 615

[< Previous MD](#) [Next MD >](#)

Mesoscale Discussion 0615  
 NWS Storm Prediction Center Norman OK  
 0610 PM CDT Sun May 01 2022

Areas affected...TX South Plains to southeast CO

Concerning...Severe Thunderstorm Watch 167...

Valid 012310Z - 020045Z

The severe weather threat for Severe Thunderstorm Watch 167 continues.

SUMMARY...Severe threat continues across the entire watch region.

DISCUSSION...Numerous strong/severe thunderstorms have developed across the High Plains from southeast CO to south of LBB. 30kt LLJ has developed along this corridor and speeds will increase after sunset which should encourage additional development/clustering across this region. Latest MRMS data suggests large hail is occurring with many of these storms and warm advection will likely contribute to an MCS by late this evening.
